

PRESS RELEASE

ProjectCentre Delivers “IT in the Construction Industry” for UNSW

Sydney, 20 May 2009: ProjectCentre was approached by the Faculty of the Built Environment at the University of New South Wales to deliver a course titled “IT in the Construction Industry”. This course was given at both an undergraduate and post graduate level. ProjectCentre embraced the opportunity.

ProjectCentre’s contribution comprised of a series of three, one-hour lectures, followed by two hour hands-on tutorials, presented at the University’s state-of-the-art IT laboratory. The focus was on how ProjectCentre software is able to support internet-based project management in construction, and formed a component of the University’s courses on the application of IT in construction management. The lectures covered the use of ProjectCentre as a web-based collaborative platform for document management, correspondence, contract administration and workflow management.

The course was considered a valuable success by both faculty and students. Faculty commented that students were impressed by the interactive and dynamic delivery methods. A key component to the course was the “real-life scenario” role playing, made possible by the ProjectCentre Team’s comprehensive industry knowledge.

ProjectCentre software is a web-based collaborative project delivery system, which offers project management, document control, contract administration, and financial management solutions. ProjectCentre was first released in 1997 and is now one of the leading collaboration systems for the construction industry within Australia and New Zealand. Our client base continues to grow internationally.

ProjectCentre is owned by CADX Pty Ltd., which is part of the Alsoni Group of companies in Australia. The Alsoni Group is a private Australian company.
